

There are lots of different ways to add a web address into a post on Talking Point.

You need to find the address of course!

Here is the thread you posted this morning:

To add the address for the thread into a post, highlight the address by clicking on it:

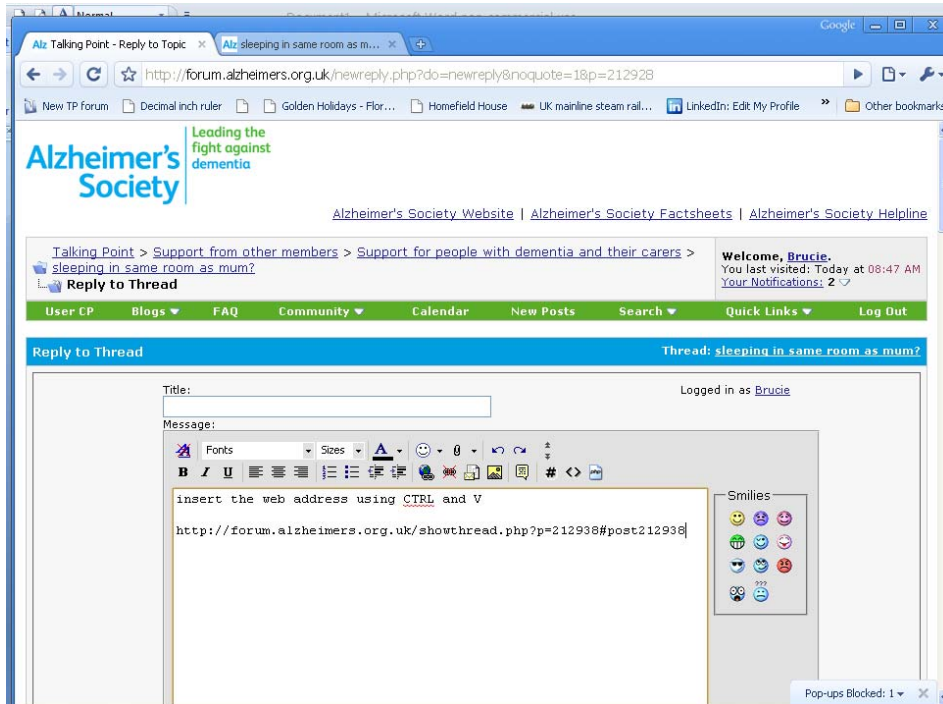

Then copy it to the clipboard – I use CTRL and C

But you can also highlight it then right-click and select Copy

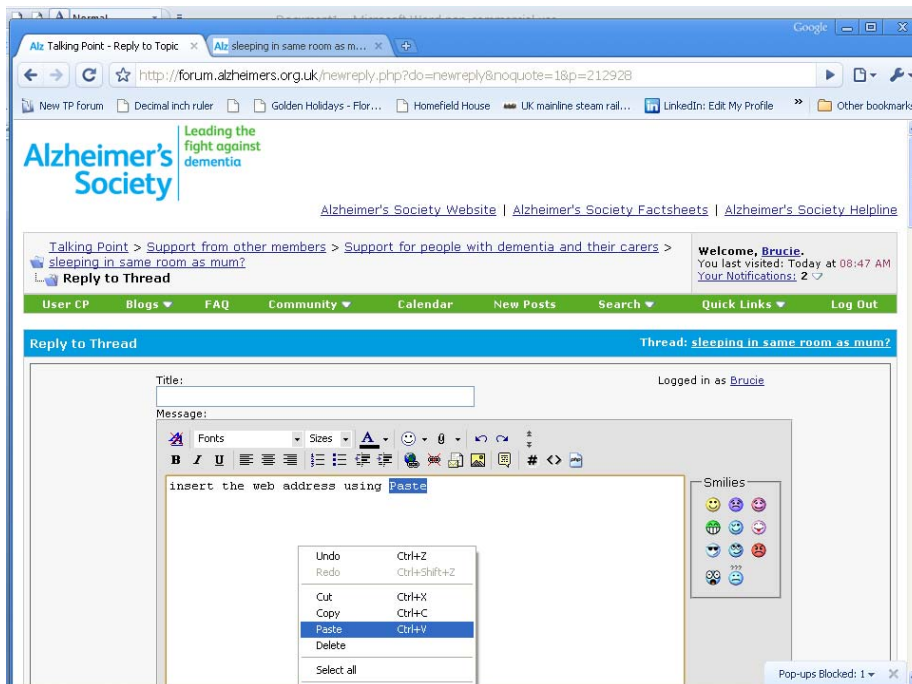

Then open the editor to write a reply or new post.

Click where you want the address to go and insert the copied address using CTRL and V

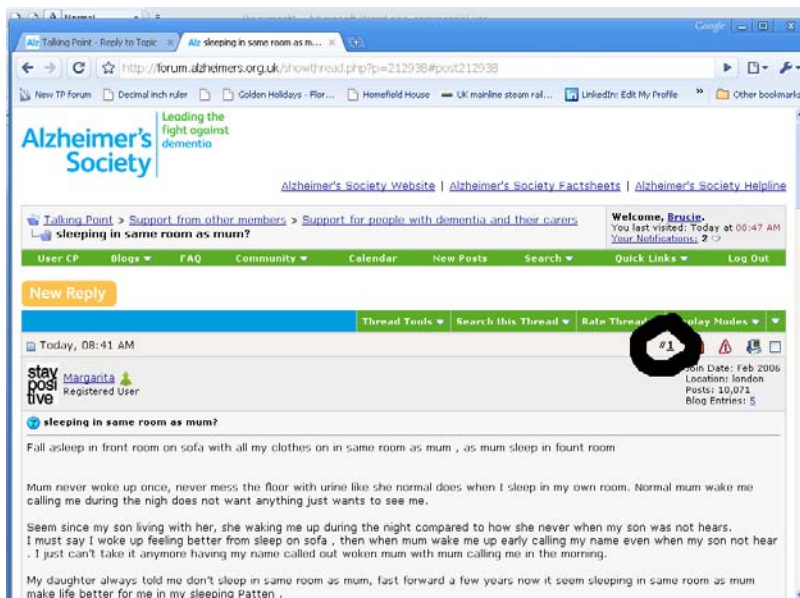

or right click and Paste to copy in the address

That's all there is to it!

If you want to insert a link to just one post in a thread – not to the thread as a whole:

Click on the post number in the thread:

Then use the address that is shown for that
